

Appendix 1 - Pruritus algorithm

Appendix 2 - Images of red faces

Rosacea: Very marked erythema with papules and pustules, no comedones.

Systemic lupus erythematosus: erythematous rash on convexities of face (butterfly rash), sparing of nasolabial folds and perioral area.

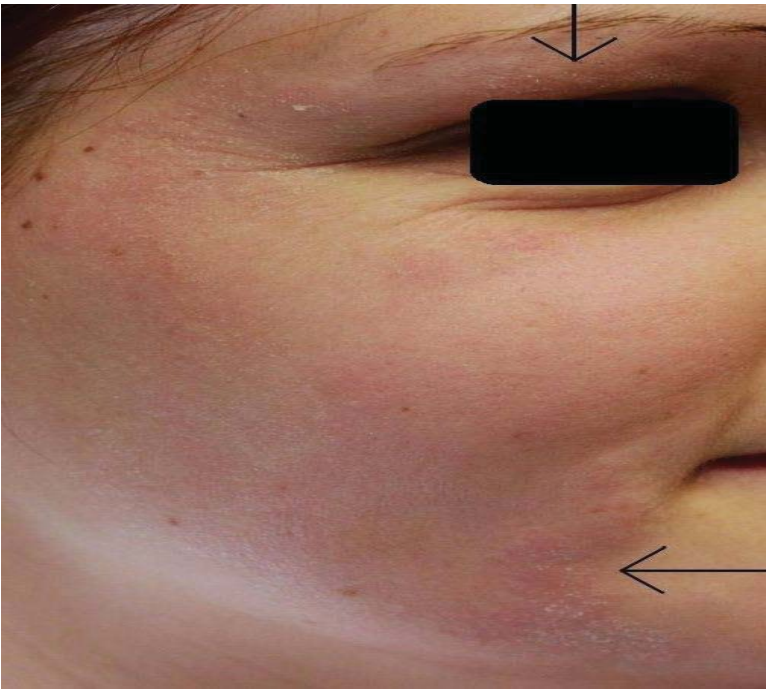

Discoid Lupus Erythematosis: One or several well-defined erythematous patches or plaques with horny plugs. Untreated lesions develop a central white scarred area.

DERMQUEST[®].com

Perioral dermatitis: erythema, papules and pustules with relative sparing of the skin adjacent to the lips- does affect nasolabial folds. Also, sparing of rest of face.

Tinea of face: erythema and scaling. Extensive and asymmetrical involvement of the right side of the face.

Seborrhoeic dermatitis/eczema: erythema and fine scaling. Involves nasolabial folds, excludes perioral area. May affect other areas including eyebrows and scalp.
